

## **For the exam**

**Time:** 2 hours (after the reading time). Be on time: 8.45am.

### **Centrally managed exam**

**Questions:** 5. Weight: about same. Weight for each question is specified in the exam paper.

You may bring lecture notes and handwritten or typed notes (**open book**).

Bring **your calculator, affixed with “UNSW APPROVED” sticker (from School’s office)**.

**All** material is covered. No programming involved but may involve looking at output of mathStatica to find some quantities of interest.

**Some** formulae will be provided in the exam paper.

Bring with you the **List of distributions most commonly used (from CB)**. You can refer to expected values, variances etc. directly in case you need them-no marks will be subtracted.

**Tables** (standard statistical tables of distributions) will be provided at the back of the exam paper (if needed).

## **My advice:**

1. Study hard. Make a summary of the whole course for yourself before the exam-make sure you have the **complete story** in your **head** before the exam!
2. **Do** practice a lot. Try to understand the solutions to assignments, mid-session exams, tutorial questions. I have provided complete solutions to **all** assessments and more than enough solutions to additional tutorial problems.
3. If **anything** is not clear, **come and ask**.

- Start preparing early, leave enough time
- I will be available for consultations by appointment any time before the exam. E-mail me to make appointment.

## **Good luck!**
